Recently, I have been playing with my Altair Astro GP-Cam (They don't make it anymore, but it has been replaced with this unit: <https://www.altirastro.com/Altair-GPCAM-AR0130-MONO-Planetary-Camera-Auto-Guider.html>). It came with a 150 degree lens, so I have mounted inside a cheap £3 dome, and placed it outside South Common Observatory.

At the moment, the stream is being captured on Windows 10 with Altair Capture, which adds the date/time stamp. From there, it is streamed to Xeoma CCTV software via a simple VLC desktop RTSP stream. Xeoma then converts to MJPEG for display here, and overlays the compass.
